

# LITTER BINS: PURE

| Categories: [LITTER BINS](#), [URBAN DESIGN](#)

## PRODUCT DESCRIPTION

Designer: [Stéphane Chapelet](#)

The PURE bin is made in steel sheet. The cover and the load-bearing structure are made of a single steel sheet of 80/10 thickness, with a central support made of a steel sheet of 20/10 thickness. The structure of the bin has a 15/10 thickness on the front part and on the side, and has a 20/10 thickness on the back and on the bottom. Inside the bin, a bag-holder in stainless steel or galvanized steel of 6 mm diam. is hooked. The bin can be emptied by rotating it on a pivot placed on the back of the bottom, thanks to the lock on the load-bearing structure. On the upper part of the load-bearing structure, an ashtray is placed, resulting from the fold of steel sheets of 10/10 thickness, and is provided with a rail system that allows the bin to be emptied without removing it completely. The bin can be fixed to the ground through 4 holes of 11 mm diam for the insertion of specific bolts (not provided).

This product is entirely made in Italy from steel subjected to an electrolytic galvanising cycle and subsequently painted with PP powders with Ral colour of your choice.

### Max Dimensions:

Height: **803 mm**  
Width: **369 mm**  
Length: **313 mm**  
Underfloor: **200 mm**  
Height with rain cover: **942 mm**  
Capacity: **45 lt**  
Ashtray Capacity: **0,75 lt**  
Weight: **43 kg**
