

LITTER BINS: SEA LIFE

| Categories: [LITTER BINS](#), [URBAN DESIGN](#)

PRODUCT DESCRIPTION

Designer: [Stéphane Chapelet](#)

The SeaLife bin is made in hypergranite, fiber-reinforced material made in polyester resin and marble powders, particularly resistant to wear and atmospheric agents. Any scratches or accidental damages can be easily repaired with a kit, available on demand. Inside the bin there are elements in stainless steel AISI 316 of 20/10 thickness, like a support of the bag-holder made in galvanized or stainless steel of 6 mm diam. On the bottom there are 3 holes: the middle one is meant for the drainage of the water, the other two are meant for the fixing to the ground of the bin through specific bolts M8 (not provided). These two holes can be used for the fixing of a base (which is optional) in hypergranite. SeaLife bin is available in different colours.

Dimensions:

Hauteur: **750 mm**

Diameter: **500 mm**

Base Diameter: **340 mm**

Capacity: **60 lt**

Weight: **60 kg**

Material: [Hypergranite](#)

Available also in the **UHPC** version.
